Yan Min Chan

Puchong, Selangor | +6011-2310 5925 | yanmin.chan08@gmail.com

Summary

Data Science MSc graduate and Software Engineer with experience building production backend systems, RESTful APIs, data integrations, and database-driven workflows.

Strong foundation in machine learning, deep learning, and statistical modelling, with hands-on experience in Python and PyTorch. Interested in applying software engineering experience to building, deploying, and maintaining production machine learning systems.

Experience

Juris Technologies Sdn. Bhd., Software Engineer **2026**

- Designed and developed end-to-end loan management features on top of an existing base product, covering backend logic, RESTful APIs, database operations, integrations, and frontend workflows.
- Owned ~80% of a product-wide common-service integration, migrating major workflows from local database lookups to centralized shared data and coordinating changes across product teams.
- Built an end-to-end loan reconciliation flow, covering client data ingestion, backend processing, database persistence, reporting with delta loading, frontend handling, and an enquiry API.
- Implemented complex business logic for multi-account dealer disbursement and parent-child account pre-termination, alongside API enhancements and validations.
- Worked directly with clients, BAs, QA, and developers across teams to clarify requirements, solve integration issues, maintain API specifications, and resolve QA/SIT defects.

Digital Symphony, Research Intern **2022**

- Managed and cleaned property data for all properties in West Malaysia using Microsoft Excel and Google Maps.
- Analysed property turnover rates in West Malaysia, focusing on location and amenities, utilizing Microsoft Excel for data analysis.

Education

Heriot-Watt University, MSc Data Science (2 Years) **2023 - 2025**

- Grade: Distinction
- Projects:
    - Built a reinforcement learning agent (Java) using algorithms based on value iteration, policy iteration and q-learning to compete against defensive, aggressive and random agents for Tic-Tac-Toe.
    - Developed a neural network model from scratch and replaced backpropagation with particle swarm optimisation (PSO) algorithm, avoiding issues with local optimisation solutions. The predictive model predicted the correct numeric output for the given inputs with a mean absolute error of 13.45.

Heriot-Watt University Malaysia, BSc (Hons) Statistical Data Science **2020 - 2023**

- Grade: First-Class Honours
- Conducted a time series analysis of sea surface temperature in Labuan waters, Malaysia. Included and compared seasonal models and neural network models, with a smallest forecast error of around 0.65% of the actual value.

Skills & abilities

- **Programming:** Python · SQL · Java · PHP · PL/SQL
- **ML / Data:** PyTorch · scikit-learn · pandas · NumPy · Machine Learning · Deep Learning · Data Processing
- **Software & Tools:** RESTful APIs · Git · Docker · Linux
- **Engineering:** Software Design · System Integration · Data Integration · Problem Solving
